The University of the District of Columbia Community College’s Workforce Development and Lifelong Learning Division (UDC-CC) in conjunction with the District Department of Transportation (DDOT) is currently recruiting small business enterprises for the Low Impact Development (LID) maintenance program. LID is a sustainable stormwater management approach that is used to restore the natural ability of an urban site to absorb stormwater, by means of infiltration, evapotranspiration, and reuse of rainwater. This program is designed to train employees in supervisory positions techniques to manage water and water pollutants at the source and thereby prevent or reduce the impact of development on rivers, streams, lakes, coastal waters, and ground water.

### Low Impact Development Training Course
